DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claims 9 and 11 are objected to because of the following informalities: "the first and second gap" should be corrected as --the first and second gaps--. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 6-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, lines 1, 3, 5 and 8, the term "substantially" is a relative term.

Regarding claim 10, applicant should clarify what is intended by "a number of turns."

Art Unit: 2832

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 6-11, as best understood in view of the rejection under 112 second paragraph, are rejected under 35 U.S.C. 103(a) as being unpatentable over Saitoh et al. [US 5,204,653] in view of Thaler [US 3,603,864].

Saitoh et al. discloses a magnetic coil device [figure 7B] comprising:

- a ring-shaped core structure [51] including first and second air gaps;
- at least one coil [52] wound about the core structure; and
- a magnetic filler synthetic resin spacer material [17] filled in the gaps.

wherein the first and second gaps enclose an angle between 5 and 355 degrees with one another.

Saitoh et al. discloses the instant claimed invention except for a concave surface formed in the magnetic filler synthetic resin spacer material.

Thaler discloses an inductance element [figure 4] comprising:

- a substantially closed magnetic core structure [32] having a gap disposed therein;
- a magnetic insert [34] disposed in the gap; wherein the magnetic core insert including at least one concave surface; and

Art Unit: 2832

- a coil structure [31] wound about the magnetic core structure.

It would have been obvious to one having ordinary skilled in the art at the time the invention was made to include a concave surface in the magnetic filler synthetic resin spacer material of Saitoh et al., as suggested by Thaler, for the purpose of varying the inductance of the device.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Tuyen T. Nguyen whose telephone number is (703) 308-0821.
